Github: <https://github.com/Kostya-star>

HARD SKILLS

React	Node.js	Figma
Vue	Express	Pixel Perfect
Angular	MongoDB	Avacode
Javascript	PostgreSQL	Photoshop
Typescript		Git
Redux		Github
HTML		GitLab
CSS		Bitbucket

SOFT SKILLS

Worked as an online English tutor for 17 months in the past

LANGUAGES

Russian - mother tongue

English - C1 (solid Upper-Intermediate)

Romanian - A1

EDUCATION

2016 - 2020

Computer Engineering

WORK EXPERIENCE

Jan. 2022 – Mar. 2022

HTML + CSS

HTML, CSS and CSS-preprocessors (LESS, SASS, SCSS).

Made a few sites using HTML, SASS and JavaScript.

Bootstrap, adaptive layout, Gulp.

Mar. 2022 – Jun. 2022

JavaScript

The basics of JavaScript (variables, data types, loops, functions, etc...) and eventually immersed into the details of the language.

Solved different tasks of different complexity.

Covered every single chapter of learn.javascript.ru.

Made a few projects with javascript.

Jun. 2022 – Dec. 2022

React + TypeScript + Redux

Learned the basics of React and then immersed myself into the framework. Created two shopping applications where a user can shop for pizza, add pizza into a cart, search for pizza, delete pizza from the cart.

Created another project from scratch. The project contains: authorization and registration with JWT, filtration, search, items deletion, etc.. Used React, Redux Toolkit, Typescript, Javascript, HTML, SCSS, CSS Modules, Github, React Router Dom, Formik, React Select, React Paginate, qs, etc..

Developed my own social media. It contained authorization with JWT Token. Main page with users' posts, comments and likes. Ability to edit profile completely: change the user's photo, change name, password, email, etc. Ability to chat with other users in real time using Socket.io. Ability to follow users, etc.

Dec. 2022 – Oct. 2023

React Developer in Tutoring (Zeno Academy)

Created everything from scratch including the layout, authorization with JWT. Built the main page landing, the tutor's page, the student's page. Developed the ability to book

lessons in real time using WebSocket, etc.

May 2023 – Jul. 2023

Endava Internship

Shared and took over the development experience from senior and experienced developers. Developed an online library project, working together with the team following the Scrum methodology. The project was developed on React and TypeScript combined features such as buying and reserving a book for a certain period, viewing all available books, etc.

Users could also register under certain roles.

Aug. 2023 – current time

Crawlless

Working with the team and using Vue.js, Javascript, TypeScript, Node.js, PostgreSQL we have been creating and changing Directus core. Directus is an Open Data Platform that helps users manipulate data in an easier way.

I was assigned to implement various solutions for Directus core, starting from developing UI and ending with modifying backend part and creating new extensions that served both for frontend and backend.
